

## **IS05 – Action Plan Document**

**Project Title:** Ceylon Go – Tour Management System

**Group Members:**

23020212 – D.D.K. Dulanjani

23020369 – V.D. Hewapathirana

23020881 – S.M.A.U. Samarasinghe

23020921 – V.R.N. Saubhagya

### **Feedback Received from Proposal Presentation**

Study similar systems to understand existing features and identify possible improvements.

Explore testing tools that can ensure quality and reliability of the system

### **Action Plan to Address the Feedback**

After receiving the feedback, our group studied several existing systems with similar functionalities, such as Booking.com. Through this research, we thought about what would make our system stand out from others. Based on that, we decided to create a detailed report that includes information such as time schedules, trip locations, and rate details for each trip. This report will help end users easily understand and compare trip details, making the system more useful and convenient for them.

We also explored suitable testing tools to ensure system quality and reliability, and we are planning to apply them during the upcoming development phase. Additionally, we carefully thought about the project scope to make sure it matches the local context and is realistic to implement. The system is being designed to suit local needs such as language preferences, currency formats, and accessibility options, making it more practical for real-world use.
